

WORKED EXAMPLE · AN INVENTED TOPIC

How a community tool shed runs

Lend a drill on Saturday, get it back by Friday: a shed that stays stocked.

Example Author

From borrowing a drill to running the shed

1

The idea

A shed lends tools and expects them back.

2

The loop

Out on Saturday, back by Friday.

3

The jobs

Registrar, checker and host.

4

A lesson

One loose handle, one new rule.

5

The mapping

What a tool shed borrows from a library.

6

Before and after

From a garage to a shed.

7

What works

Few rules, labelled hooks.

8

Starting out

Three weeks from an empty garage.

9

The numbers

A first year, in three figures.

THE POINT

A tool shed lends tools, and expects them back

Four ideas carry the whole deck.

- Neighbours **borrow a tool** for a week, free, with a name in the ledger.
- They use it, **clean it** and hang it back on its own hook.
- Every tool has a **ledger line**: what it is, its condition, who gave it.
- Because tools come back, the shed **needs no budget** beyond blades and oil.
- Nothing is sold; the only currency is a tool returned clean.

Tools go out on Saturday and come back by Friday

Return: hang it back clean, and write the date in the ledger.

IN SHORT A tool that comes back clean is why the hooks never stay empty.

SIX JOBS

Six jobs keep the shed open

Each job is small and has one test.

The registrar

Writes one ledger line per tool: its name, its condition and who gave it. A tool with no line is not hung.

The checker

Looks at each returned tool: clean, dry, nothing loose. Anything damaged goes to the repair bench, never back on a hook.

The host

Opens the shed on Saturday mornings, hands out tools and explains the one rule: bring it back by Friday.

The mender

Sharpens, oils and fixes at the repair bench, and signs the ledger line when a tool is fit.

The stocker

Watches the gaps on the hooks and asks neighbours for the tools the shed is missing.

The spare hands

Not a job yet: anyone who helps on a Saturday and may take a job later.

A LESSON, WITH A MADE-UP EXAMPLE

A rule that came from one loose handle

A hammer went out with a cracked handle.

WHAT WENT WRONG

A returned hammer was hung back on its hook with a hairline crack in the handle. A borrower swung it and the head came off.

WHY IT GOT THROUGH

The checker looked at the head, which was fine, and trusted the note the borrower had left.

THE RULE NOW

A returned tool is hung only after the checker has tried every moving part, and the ledger line says who checked it.

LESSON Test the tool with your hands, not only your eyes.

THE MAPPING

A tool shed borrows its habits from a book library

BOOK LIBRARY		TOOL SHED	SAME OR DIFFERENT?
A catalogue entry per book	→	A ledger line per tool	same idea
A due date stamped inside	→	A Friday deadline, said aloud	looser here
A fine for a late book	→	A reminder and a cup of tea	kinder here
Damaged books are mended	→	Damaged tools go to the bench	same idea
A card to join	→	A name in the ledger	simpler here
Opening hours all week	→	Saturday mornings only	fewer hours

THE NUMBERS

Most tools come back, and on time

BEFORE AND AFTER

From a shared garage to a labelled shed

BEFORE

Tools lived in one garage. Nobody knew what was there, so people bought a second drill and the first went missing.

NOW

Every tool has a hook, a ledger line and a Friday deadline, so anyone can see what is in and what is out.

FINDING

A shelf of hooks, each labelled with the tool's name.

TRUSTING

A ledger line says its condition and who checked it last.

RETURNING

A tool hung back clean is the only sign-off it needs.

Keep the rules few and the hooks labelled

Two lists, four short lines each.

What works

- A hook for every tool
- A ledger line for every hook
- One rule said out loud
- Saturday mornings, always

What does not

- Tools with no home
- Rules on a long notice board
- Fines nobody collects
- Opening whenever someone is free

PART TWO

2

Starting your own

Three weeks from an empty garage to an open shed.

IN THEIR WORDS

What a first-time borrower said

Said at the end of a first Saturday.

“ I came for a ladder and left with **the confidence** to ask for a second tool next week.

An invented borrower

TO REMEMBER

A shed runs on returns

Three numbers from an invented shed in its first year.

40

tools given by neighbours in the first month

312

loans in the year, all of them returned

1

volunteer hour to learn any of the three jobs
